

TAJUDEEN ABDULMALIK ADEYEMI
Nigeria | abdulmalikasaduallah@gmail.com

PROFESSIONAL SUMMARY

Detail-oriented Data Scientist with a strong foundation in data collection, analysis, and evaluation, leveraging structured methodologies to extract meaningful insights from complex datasets. Proficient in utilizing digital tools, programming languages, and analytical frameworks to deliver accurate, data-driven results.

Experienced in applying quality assessment standards, ensuring data integrity, and translating findings into actionable recommendations. Self-directed and results-driven professional committed to precision, consistency, and continuous improvement in every phase of the data science lifecycle.

CORE SKILLS

Programming and Databases: Python, SQL, MySQL, Git/GitHub

Machine Learning and Statistics: Linear Regression, Logistic Regression, Random Forest, K-Means Clustering, Decision Trees, Model Evaluation & Optimization

Data Science Libraries and Frameworks: Pandas, NumPy, Scikit-learn, PyTorch, Matplotlib, Seaborn

Data Visualization and BI Tools: Power BI, Microsoft Excel (Advanced), Google Data Studio, Dashboard Design and Reporting

Data Management and Analysis: Data Cleaning and Preprocessing, Exploratory Data Analysis (EDA), Feature Engineering, Data Annotation, Data Categorization and Labeling

Research & Communication: Web Research, Fact-Checking, Source Verification, Clear & Structured Reporting, Technical Documentation

PROFESSIONAL EXPERIENCE

Technology Facilitator (Volunteer) — Craft Innovation Hub, Ilorin, Nigeria *2025 – 2026*

- Delivered digital literacy training covering data management, file organization, and productivity tools
- Designed structured training materials and technical documentation, ensuring clarity and accuracy
- Tracked and analyzed participant progress using spreadsheets and forms, generating performance reports
- Maintained and updated learning content databases to ensure consistency and correctness across records

Data Scientist — Craft Innovation Hub, Ilorin, Nigeria – *Present*

- Developed and deployed predictive models using regression, classification, and clustering techniques to support innovation projects
- Conducted exploratory data analysis (EDA) on diverse datasets to uncover trends, correlations, and actionable insights
- Automated data pipelines and preprocessing workflows, improving efficiency and reducing manual effort
- Collaborated with cross-functional teams to design data-driven solutions for local business and community challenges
- Visualized findings using Power BI and Python libraries (Matplotlib, Seaborn), enhancing stakeholder decision-making
- Documented methodologies, results, and recommendations in clear technical reports and presentations

PROJECTS

DATA ANALYSIS PROJECTS

Sales Performance Dashboard (Microsoft Excel)

- Developed an interactive sales performance dashboard using **Microsoft Excel** based on an open-source dataset from **Kaggle**.
- Cleaned and transformed raw sales data using advanced Excel functions, PivotTables, and data validation techniques.
- Designed dynamic charts and KPI cards to monitor key business metrics, including total revenue, monthly sales trends, top-performing products, and regional performance.
- Built an interactive reporting dashboard with slicers and filters to enable data-driven business insights and decision-making.
- **Technologies:** Microsoft Excel, PivotTables, Pivot Charts, Lookup Functions, Conditional Formatting, Data Cleaning

FIFA World Cup 2026 Player Performance Analysis (Power BI)

- Cleaned and transformed a FIFA World Cup 2026 player performance dataset using Excel and Power Query.
- Performed exploratory data analysis (EDA) to identify trends in player performance, goals, assists, passing accuracy, and team statistics.
- Built an interactive Power BI dashboard featuring KPIs, player comparisons, filtering by country and position, and tournament insights.
- Applied data cleaning techniques, including handling missing values, removing duplicates, standardizing data formats, and creating calculated measures.
- Produced visual reports to support performance analysis and decision-making.

Technologies: Power BI, Microsoft Excel, Power Query, DAX

Hospital Analytics Dashboard (Power BI) (Open-source dataset from Kaggle)

- Cleaned, transformed, and modeled hospital operational data using Power BI Power Query to improve data quality and consistency.
- Designed an interactive Power BI dashboard to monitor key healthcare KPIs, including patient admissions, discharge rates, department performance, and hospital revenue.
- Built dynamic visualizations, slicers, and drill-through reports to enable efficient analysis of hospital operations and support data-driven decision-making.
- Applied DAX measures and calculated columns to generate performance metrics and automate business insights.

AI/ML PROJECTS

Loan Prediction Machine Learning Model — Python

- Developed a machine learning classification model to **predict loan outcomes** based on applicant and financial characteristics.
- Cleaned and prepared the dataset for machine learning, including data preprocessing and feature preparation.
- Trained and evaluated machine learning algorithms to identify the model best suited for loan prediction.
- Used Python-based data science tools to analyze model performance and generate predictive insights.
- **Technologies:** Python, Pandas, NumPy, Scikit-learn, Machine Learning

Student Performance Prediction System — Python

- Developed a machine learning model to **predict whether a student would pass or fail** based on relevant student-performance factors.
- Applied data preprocessing and machine learning techniques to prepare the dataset and build the predictive model.

- Designed the solution to provide **reasons behind the prediction and personalized recommendations** for improving student outcomes.
- Evaluated model performance and analyzed feature relationships to support data-driven educational insights.
- **Technologies:** Python, Pandas, Scikit-learn, Machine Learning, Predictive Analytics

Disease Prediction System — Python

- Developed a machine learning-based system to **predict potential diseases from provided health-related features**.
- Cleaned and prepared healthcare data before applying machine learning classification techniques.
- Built a predictive workflow that provides a potential disease prediction together with **recommendations based on the result**.
- Applied data analysis and predictive modeling techniques to demonstrate the use of machine learning in healthcare.
- **Technologies:** Python, Pandas, Scikit-learn, Machine Learning, Predictive Analytics

EDUCATION

Bachelor of Science – Computer Science

Nigeria

LANGUAGES

English – Fluent (reading, writing, and spoken communication)

Yoruba – Native

Arabic – Fluent (reading, writing, and spoken communication)
